Fundamental to understanding human sexual expression is reliable and valid measurement and assessment. Many instruments have been developed to measure a myriad of sexuality-related states, traits, behaviors, and outcomes. Few are easily accessible and the information is limited concerning appropriate use and psychometric properties. In Handbook of Sexuality-Related Measures, more than 200 instruments are reproduced, accompanied by the necessary information for their use in research, as well as educational and clinical settings. Measures relating to more than 50 topics are included. Examples are abortion, aging, arousal, general and specific attitudes and behavior, contraception, dysfunctions, education, experience, gender identity, homosexuality, ideology, jealousy, knowledge, masturbation, orgasm, rape, and sexually transmitted diseases. Each chapter describes the development and appropriate use of each instrument, giving information on timing, scoring, and interpretation. Reliability and validity data are summarized and completely referenced. Nearly all articles include the entire instrument; others provide illustrative content from the instrument and give all necessary information to obtain the instrument. This volume contains the proceedings of the tenth annual Symposium on Theoretical Aspects of Computer Science (STACS '93), held in Würzburg, February 25-27, 1993. The STACS symposia are held alternately in Germany and France, and organized jointly by the Special Interest Group for Theoretical Computer Science of the Gesellschaft für Informatik (GI) and the Special Interest Group for Applied Mathematics of the Association Française des Sciences et Technologies de l'Information et des Systèmes (afcets). The volume includes the three invited talks which opened the three days of the symposium: "Causal and distributed semantics for concurrent processes" (I. Castellani), "Parallel architectures: design and efficient use" (B. Monien et al.), and "Transparent proofs" (L. Babai). The selection of contributed

papers is organized into parts on: computational complexity, logic in computer science, efficient algorithms, parallel and distributed computation, language theory, computational geometry, automata theory, semantics and logic of programming languages, automata theory and logic, circuit complexity, omega-automata, non-classical complexity, learning theory and cryptography, and systems. An essential text for both students and professionals, combining detailed theory with clear practical guidance This outstanding book explores a large spectrum of topics within microwave and radio frequency (RF) engineering, encompassing electromagnetic theory, microwave circuits and components. It provides thorough descriptions of the most common microwave test instruments and advises on semiconductor device modelling. With examples taken from the authors' own experience, this book also covers: network and signal theory; electronic technology with guided electromagnetic propagation; microwave circuits such as linear and non-linear circuits, resonant circuits and cavities, monolithic microwave circuits (MMICs), wireless architectures and integrated circuits; passive microwave components, control components; microwave filters and matching networks. Simulation files are included in a CD Rom, found inside the book. Microwave and RF Engineering presents up-to-date research and applications at different levels of difficulty, creating a useful tool for a first approach to the subject as well as for subsequent in-depth study. It is therefore indispensable reading for advanced professionals and designers who operate at high frequencies as well as senior students who are first approaching the subject. Written by a leading expert in the field of measurement and verification, this book provides a truly authoritative resource on the skill and art of managing and monitoring performance contracted energy projects. Following a brief review of the fundamental concepts of performance contracting, the author guides the reader through every aspect of actually implementing a successful performance contract. You'll find out what can lead a project to go wrong, as well as how to monitor and verify a project's true performance all along the way. Numerous case studies and specific project examples are used to clearly illustrate the concepts presented. Comprehensive in scope, and drawn from the author's years of practical experience in the field, this book is essential reading for anyone who is either already involved with or considering use of performance contracting. The guide is a reference book that provides a comprehensive view of all aspects of the cotton value chain from a market perspective, and an overview of the world cotton market. It outlines factors influencing supply and demand, and market trends; considers major issues of the sector, including trade policy and WTO issues; deals with textile processing of cotton, cotton quality and its determinants, and cotton contamination; covers various aspects of cotton trading and export marketing; looks at e-commerce, the ICE Futures U.S. and other futures markets for cotton; reviews the market for

different types of cotton, including organic cotton; presents market profiles of the main importing countries in Asia (Bangladesh, China, India, Indonesia, Pakistan, Thailand) and Turkey, with recommendations on how to approach their cotton-consuming textile industries. Annexes contain a list of international cotton associations, as well as lists of useful addresses and web resources.

The objective of this report is to inform an improved understanding of expenditure allocations and processes, the quality of service delivery in terms of inputs and outputs, and educational outcomes associated with primary education in Malawi. The report will also assess the government's own diagnosis of challenges in the primary education sub-sector, and the reform program intended to address

them. The findings of this report are intended to inform discussions as to how to strengthen the government program and associated financing mechanisms, to enhance the likelihood of success. This book constitutes the refereed proceedings of five workshops co-located with SAFECOMP 2017, the 36th International Conference on Computer Safety, Reliability, and Security, held in Trento, Italy, in September 2017. The 38 revised full papers presented together with 5 introductory papers to each workshop, and three invited papers, were carefully reviewed and selected from 49 submissions. This year's workshops are: ASSURE 2017 – Assurance Cases for Software-Intensive Systems; DECSoS 2017 – ERCIM/EWICS/ARTEMIS Dependable Embedded and Cyber-Physical Systems and Systems-of-Systems; SASSUR 2017 – Next Generation of System Assurance Approaches for Safety-Critical Systems; TIPS 2017 – Timing Performance in Safety Engineering; TELERISE 2017 Technical and legal Aspects of Data Privacy and Security. This book contains well-written monographs within the broad spectrum of applied mathematics, offering an interesting reading of some of the current trends and problems in this fascinating and critically important field of science to a broad category of researchers and practitioners. Recent developments in high-performance computing are radically changing the way we do numerics. As the size of problems is expected to grow very large in the future, the gap between fast and slow algorithms is growing rapidly. Novel classes of numerical methods with reduced computational complexity are therefore needed to make the rigorous numerical solution of difficult problems arising in an industrial setting more affordable. The book is structured in four distinct parts, according to the purpose and approaches used in the development of the contributions, ranging from optimization techniques to graph-oriented approaches and approximation theory, providing a good mix of both theory and practice.

toxicology Short papers describing results of recent geologic investigations. The theory of traces employs techniques and tackles problems from quite diverse areas which include formal language theory, combinatorics, graph theory, algebra, logic, and the theory of concurrent systems. In all these areas the theory of traces has led to interesting problems and significant results. It has made an especially big impact in formal language theory and the theory of concurrent systems. In both these disciplines it is a well-recognized and dynamic research area. Within formal language theory it yields the theory of partially commutative monoids, and provides an important connection between languages and graphs. Within the theory of concurrent systems it provides an important formal framework for the analysis and synthesis of concurrent systems. This monograph covers all important research lines of the theory of traces; each chapter is devoted to one research line and is written by leading experts. The book is organized in such a way that each chapter can be read independently and hence it is very suitable for advanced courses or seminars on formal language theory, the theory of concurrent systems, the theory of semigroups, and combinatorics. An extensive bibliography is included. At present, there is no other book of this type on trace theory. This two-volume proceedings constitutes the refereed papers of the 17th International Multimedia Modeling Conference, MMM 2011, held in Taipei, Taiwan, in January 2011. The 51 revised regular papers, 25 special session papers, 21 poster session papers, and 3 demo session papers, were carefully reviewed and selected from 450 submissions. The papers are organized in topical sections on audio, image video processing, coding and compression; media content browsing and retrieval; multi-camera, multi-view, and 3D systems; multimedia indexing and mining; multimedia content analysis; multimedia signal processing and communications; and multimedia applications. The special session papers deal with content analysis for human-centered multimedia applications; large scale rich media data management; multimedia understanding for consumer electronics; image object recognition and compression; and interactive image and video search.
