A wide variety of numerical formulae and strategies provide the means for explaining events and solving problems occurring in everyday life. These include such matters as the choice of the name for a child, ranking in almost any game or sport, the diagnosis and cure of illness or the decision to accept a new job. This text provides a general study of the field of Japanese popular numeracy. It introduces the reader to a world of numbers in which fortune-telling, the

abacus and games involving numbers, as well as curious numerical names (of both people and places), illustrate the importance of systems of counting, calculation and forecasting. The study explores the cultural roots of attitudes towards numbers and makes suggestions about the contemporary implications of a culture in which mechanical numeracy (and number obsession) is general but the highest levels of academic mathematics still fall short of world standards. Part 1 of this report contains summaries of the evaluations of residues in food of the various pesticides considered, together with the recommendations made. Bonus sections list parts identification and interchange, and explains in-vehicle cylinder head and timing chain repair. Written by an internationally recognized specialist on Buraku studies, this book casts new light on majority-minority relations and the struggle for Buraku liberation. Ian Neary focuses on the Burakumin activist, left-wing politician, family company manager and arguably the most important Buraku leader of the twentieth century: Matsumoto Jiichiro. Based on primary material reflecting recent research, each chapter locates Matsumoto Jiichiro's experience within the broader developments in Japan's social, political and economic history and illuminates dimensions of its social history during the twentieth century that are frequently left unconsidered. As an examination of Buraku history this book will appeal to scholars and students of Japanese political and economic history, ethnic and racial studies, socialism, social thought and social movements. Chemical pest control is in use in practically every country in the world since agrochemicals play a decisive role in ensuring food supply and protection against damage by pests, insects and pathogenic fungi. Particularly in the half century since World War II, food production has risen dramatically in most parts of the world. In the last 20 years, the yield of major crops has roughly doubled in Western agriculture and there is still the potential for further achievements, particularly in the developing countries. The world's cereal and rice production, now more than 2 billion tons/year, has to increase by 2.4% annually to cope with the rising food demand caused mainly by the growing population and improvement of living standards in most of the developing countries. Such a demand for food has to be achieved by higher yields from the restricted arable land already in use. Global farm land resources are about 1.4 billion ha, of which 1.2 billion ha is cultivated with major crops. Experts agree that a future substantial addition of new productive areas is unlikely. Those with a high yield potential are already in use; new fields with a lower output may possibly be obtained by cultivation of arid or cold areas. More recently, new areas of large-scale farmland have been developed in tropical regions of Latin America, primarily in Argentina and Brazil, at the cost of the destruction of tropical rain forest. Endō Shūsaka is probably the most widely translated of all Japanese authors. In this first major study of Endō's works, Mark Williams moves the discussion on from the well-worn depictions of Endō as the 'Japanese Graham Greene', and places him in his own political and cultural context. After World War II, many regional conflicts emerged in the Asia-Pacific, such as the divided Korean peninsula, the Cross-Taiwan Strait, the 'Northern Territories', (Southern Kuriles) Takeshima (Dokdo), Senkaku (Diaoyu) and the Spratly (Nansha) islands problems. These and other disputes, such as the Okinawa problem in relation to the US military presence in the region, all share an important common foundation in the post-war disposition of Japan, particularly the 1951 Peace Treaty. Signed by forty-nine countries in San Francisco, this multilateral treaty significantly shaped the post-war international order in the region, and with its associated security arrangements, laid the foundation for the regional Cold War structure, the "San Francisco System." This book examines the history and contemporary implications of the "San Francisco System," with particular focus on its frontier problems. Drawing on extensive archival research and in-depth analysis, Kimie Hara uncovers key links between the regional problems in the Asia-Pacific and their underlying association with Japan, and explores the clues for their future resolution within the multilateral context in which they originated. Cold War Frontiers in the Asia-Pacific will appeal to students and scholars interested in international relations of the Asia-Pacific region, diplomatic history and Japanese diplomacy. The author gets to the very core of what makes a successful and dynamic enterprise. Building upon his earlier work, *The Ascendant Organisation* and slaying a number of business fads and sacred cows along the way, he shows how to energize the enterprise in key areas such as leadership, teamwork and innovation. With the use of many examples and cases and building upon considerable experience, he shows the way forward for companies to achieve a sense of purpose and to energize their organizations. If you are tired of the latest business fad, then this will be the book for you. In the 1980s the performance of Japan's economy was an international success story, and led many economists to suggest that the 1990s would be a Japanese decade. Today, however, the dominant view is that Japan is inescapably on a downward slope. Rather than focusing on the evolution of the performance of Japanese capitalism, this book reflects on the changes that it has experienced over the past 30 years, and presents a comprehensive analysis of the great transformation of Japanese capitalism from the heights of the 1980s, through the lost decades of the 1990s, and well into the 21st century. This book posits an alternative analysis of the Japanese economic trajectory since the early 1980s, and argues that whereas policies inspired by neo-liberalism have been presented as a solution to the Japanese crisis, these policies have in fact been one of the causes of the problems that Japan has faced over the past 30 years. Crucially, this book seeks to understand the institutional and organisational changes that have characterised Japanese capitalism since the 1980s, and to highlight in comparative perspective, with reference to the 'neo-liberal moment', the nature of the transformation of Japanese capitalism. Indeed, the arguments presented in this book go well beyond Japan itself, and examine the diversity of capitalism, notably in continental Europe, which has experienced problems that in many ways are also comparable to those of Japan. *The Great Transformation of Japanese Capitalism* will appeal to students and scholars of both Japanese politics and economics, as well as those interested in comparative political economy. Although Western writer Zane Grey is best remembered for *The Riders of the Purple Sage*, the novel *The U.P. Trail* is a favorite among critics and fans alike. This ambitious tale weaves a grand narrative of the construction of the Union Pacific Railroad line, which serves as the backdrop for a tender romance that blooms between the virtuous Allie and the mysterious and taciturn protagonist, Warren Neale.
