This book provides an overview of current trends and practices in English Language Teaching (ELT) across the European Union. It offers insights into key ELT issues which are at the forefront of twenty-first-century classrooms. It discusses theoretical and empirical work based on topics such as linguistic imperialism, English as a Medium of Instruction, contrastive language analysis, and the interplay between English and the use of countries' respective native languages. It also explores the challenges of English Language Teaching under different circumstances such as, while using different technological platforms, working with different learner groups (those with Special Educational Needs) and revising traditional practices in grammar and vocabulary teaching. Throughout the book, the link between policy, theory and practice is explicitly highlighted and exemplified. The book is of interest to ELT instructors, course designers, language teachers and teacher trainers, and students enrolled in pre-service English training courses.

How ed tech was born: Twentieth-century teaching machines--from Sidney Pressey's mechanized test-giver to B. F. Skinner's behaviorist bell-ringing box. Contrary to popular belief, ed tech did not begin with videos on the internet. The idea of technology that would allow students to "go at their own pace" did not originate in Silicon Valley. In *Teaching Machines*, education writer Audrey Watters offers a lively history of predigital educational technology, from Sidney Pressey's mechanized positive-reinforcement provider to B. F. Skinner's behaviorist bell-ringing box. Watters shows that these machines and the pedagogy that accompanied them sprang from ideas--bite-sized content, individualized instruction--that had legs and were later picked up by textbook publishers and early advocates for computerized learning. Watters pays particular attention to the role of the media--newspapers, magazines, television, and film--in shaping

people's perceptions of teaching machines as well as the psychological theories underpinning them. She considers these machines in the context of education reform, the political reverberations of Sputnik, and the rise of the testing and textbook industries. She chronicles Skinner's attempts to bring his teaching machines to market, culminating in the famous behaviorist's efforts to launch Didak 101, the "pre-verbal" machine that taught spelling. (Alternate names proposed by Skinner include "Autodidak," "Instructomat," and "Autostructor.") Telling these somewhat cautionary tales, Watters challenges what she calls "the teleology of ed tech"--the idea that not only is computerized education inevitable, but technological progress is the sole driver of events. Moving from general themes to specific pedagogical concerns, it includes practice-oriented chapters on the role of genre, task construction, course and lesson design, writing assessment, feedback, error treatment, and classroom language (grammar, vocabulary, style) instruction. Although all topics are firmly grounded in relevant research, a distinguishing feature of the text is the array of hands-on, practical examples, materials, and tasks that pre- and in-service teachers can use to develop the complex skills involved in teaching second language writing. Each chapter includes Questions for Reflection, Further Reading and Resources, Reflection and Review, and Application Activities. An ideal text for L2 teacher preparation courses, courses that include both L1 and L2 students, and workshops for

instructors of L2 writers in academic (secondary and postsecondary) settings, the accessible synthesis of theory and research enables readers to see the relevance of the field's knowledge base to their own present or future classroom settings and student writers. This practical guide for the nursing student and practicing nurses contains more than 120 common procedural guidelines with rational and step-by-step descriptions. Autism and Asperger Syndrome reviews what is known about adults with autism in terms of their social functioning, educational and occupational status. Focusing mainly on the problems experienced by high functioning people with autism - and those working with and caring for them - the book offers practical ways of dealing with their difficulties. Each chapter makes use of clinical case material to illustrate the kinds of problems faced and ways in which they may be overcome. First-hand accounts from people with autism are included and links with psychiatric illness in later life are explored. This updated edition is helpful to both professionals and families with autistic children and has been completely updated to take account of the latest research in the field. It also includes an additional chapter on the differences between autism and Asperger syndrome.
