Al Dente's Inferno Mar 05 2021

An American chef will have to serve up more than good eats if she wants to establish a successful farm-to-table cooking school in Tuscany, in this charming first installment in a new cozy mystery series set in Italy. When Nell Valenti is offered a chance to move to Tuscany to help transform an aging villa into a farm-to-table cooking school, she eagerly accepts. After all, both her job and her love life in America have been feeling stale. Plus, she'll get the chance to work under the acclaimed Italian Chef Claudio Orlandini. But Nell gets more than she bargained for when she arrives. With only a day to go until the launch dinner for the cooking school, the villa is in shambles, and Chef O is

blissfully oblivious of the work that needs to be done before a group of local dignitaries arrive, along with a filmmaker sent to showcase and advertise the new school. The situation only worsens when Nell discovers that the filmmaker is an ex-boyfriend, and he's found murdered later that night.

Even worse, Chef O has disappeared, and accusations of murder could shut the school down for good. As tensions reach a boiling point at the villa, Nell must throw her chef's hat into the ring, and investigate the murder herself. Because if she fails to solve the case, her career, or even her life, could be next on the chopping block.

Bushmaster Mar 17 2022 The amazing story of one man's obsession with an enigmatic and deadly reptile. Raymond Ditmars (1876-1942), the first curator of reptiles at New York's famous Bronx Zoo, brought cold-blooded animals to public attention as never before. Through wildly successful books and movies, he inspired a generation of zoologists with his fascination for snakes, insects, and other misunderstood creatures. Ditmars was among the most celebrated naturalists in America. His reptile-collecting trips for the zoo spawned newspaper headlines across

the world. Although a serpent lover, he was all too aware of the devastating effects of snakebites and was instrumental in the development of antivenom. His films and writings brought him fame, but he remained a devoted zoo employee, doing what he loved most: caring for animals. Bushmaster tells the story of this remarkable man and what became an obsession with the mysterious bushmaster of the South American rainforest. Measuring up to thirteen feet in length, this is the world's largest viper, and its scientific name, *Lachesis muta*, translates as "silent fate." Despite numerous expeditions to jungles from Honduras to Brazil, Ditmars could never capture a bushmaster for himself. Now, British author Dan Eatherley follows in Ditmars's footsteps, revisiting his early haunts in the United States and South America. He attempts to do what Ditmars himself failed to achieve: to find a bushmaster in the wild. But eighty years later, will Dan

have any more luck? Through the author's own quest, Bushmaster reveals the life of a pioneer herpetologist, wildlife filmmaker, and zoo curator. [A.S. of C.C. Bulletin](#) Jan 23 2020

An Arrangement of Skin Jun 20 2022

"These are intimate, delicate essays about the many skins we inhabit, illuminating even in their darkness." —The Boston Globe Anna Journey revels in the flexibility and hybridity of the essay form, swerving artfully among topics—a recollection of a personal rupture and ensuing call to a suicide hotline opens into a consideration of taxidermy and lyric time; a mother's penchant for telling macabre stories at the dinner table connects to campfire songs and the cultural importance of American roots music; and a tattoo artist named after a pirate-themed rum reminds us how we inscribe our skins and spirits through the intimate gestures

of ink.

Conserving Southern

Longleaf Feb 16 2022

The Red Hills region of south Georgia and north Florida contains one of the most biologically diverse ecosystems in North America, with longleaf pine trees that are up to four hundred years old and an understory of unparalleled plant life. At first glance, the longleaf woodlands at plantations like Greenwood, outside Thomasville, Georgia, seem undisturbed by market economics and human activity, but Albert G. Way contends that this environment was socially produced and that its story adds nuance to the broader narrative of American conservation. The Red Hills woodlands were thought of

primarily as a healthful refuge for northern industrialists in the early twentieth century.

When notable wildlife biologist Herbert Stoddard arrived in 1924, he began to recognize the area's ecological value.

Stoddard was with the federal government, but he drew on local knowledge to craft his land management practices, to the point where a distinctly southern, agrarian form of ecological conservation emerged. This set of practices was in many respects progressive, particularly in its approach to fire management and species diversity, and much of it remains in effect today. Using Stoddard as a window into this unique conservation landscape, *Conserving Southern Longleaf* positions the Red Hills as a valuable center for research into and understanding of wildlife biology, fire ecology, and the environmental appreciation of a region once dubbed simply the "pine barrens."

Wildlife Forensic

Investigation Feb 04 2021

Wildlife forensics is the application of forensic science to the conservation and protection of non-domesticated animals, both in the wild and in captivity. Providing an in-depth introduction to this rapidly evolving field, *Wildlife Forensic Investigation: Principles and Practice* also chronicles aspects of the history of management, conservation, and environmental protection, with an emphasis on their global importance in the twenty-first century. The book examines the crucial role of wildlife forensic investigation with regard to live animals, dead animals and samples and covers national, regional, and international legislation. While the text particularly focuses on forensic science as it relates to wild animals, it also includes mention of plants and habitats because of their relevance to conservation. The book discusses animal welfare as

well as the damage that can be inflicted on humans and property by wildlife. Offering access to sound evidence based on good science and obtained using the best available practices, the book is enhanced by case studies from experts who describe some of their own work. This resource is essential for those involved in a range of endeavours, including investigating wildlife crime, identifying animal remains, ascertaining the circumstances of death of wild species, and other legal proceedings and activities concerning wildlife. The forensic skills described in this book can be applied to a wide range of activities (not necessarily involving the legal process), including environmental impact assessments, insurance claims, governmental and other enquiries, checking of trading standards and the inspection of (for instance) pet-shops, animal boarding establishments, and zoological collections. The authors point out that one of the most important requirements of those persons

involved in wildlife forensic work is to retain an open mind. Such personnel should also be conscious of new developments and evolving techniques and be able to anticipate situations where their investigative and scientific skills might be used to advantage—so-called "horizon scanning". Examples of these are given.

Artistic and Scientific Taxidermy and Modelling - A Manual of Instruction in the Methods of Preserving and Reproducing the Correct Form of All Natural Objects, Including a Chapter on the Modelling of Foliage

Dec 26 2022 This early work on the art of taxidermy, Montagu Browne, was originally published in 1896. It is designed as an instructive manual on the various methods and processes involved in taxidermy, and includes chapters such as 'The Tools Used in Taxidermy and Modelling', 'The Collecting of Mammals, Birds, and Other Vertebrates, and Invertebrates,

by Various Methods', 'The Skinning and Setting-Up of Birds by Various Methods', 'The Mounting of Animals in an Artistic Manner', and much more. Accompanied by many illustrations, this is a fantastic read for anyone with an interest in learning the skills of taxidermy. To compliment the republication of this work, a brand new introduction on the history of Taxidermy has been included.

A Short Story Collection of Horrors, the Bizarre, and the Mysterious May 19 2022 The title explains it all. A Short Story Collection of Horrors, the Bizarre, and the Mysterious is a 22-story horror collection

ranging from the traditional Halloween story to the very bizarre. There is a vast variety of characters, from the criminal mind to black cats, witches, the insane, Satan, and the grim reaper. If you are a horror fan, get ready for a journey loaded with twists and turns. One thing these stories all have in common is that each one has an exceptional surprise ending. The other thing they all possess is the ability to keep readers on the edge of their seat. By the time you reach the very last story, you will be left breathless and terrified. Two of these stories have won writing contests. See if you can figure out which ones. "As the author, I must be honest. Once these stories were on paper and I was removed, when I went back to read them, some of these tales even scared me." .
