therapies "Robert Post is one of
the modern pioneers and
towering figures in the
investigation and treatment of
bipolar illness. This volume is a
master class in bipolar
disorder."—Russell T. Joffe,
MD, Professor of Psychiatry,
New Jersey Medical School.
This landmark work, based on
years of systematic clinical
trials and observations at the
National Institutes of Mental

Health (NIMH) and elsewhere, is the definitive clinical resource on patients with difficult-to-treat bipolar disorder. In the most comprehensive compendium to date, Post and Leverich, both veteran clinicians and expert researchers on bipolar disorder, take a broad, long-term view of the illness rather than simply looking at the short-term manic episodes that so traditionally typify the disorder. In doing so, they present an authoritative primer on the life course and treatment of bipolar disorder, including issues of remission, recurrence, and the nuances so critical to effective clinical decision-making in protracted

treatment. Presenting over 60 individual case studies covering a broad range of patients and treatment approaches, Post and Leverich equip clinicians with countless examples to draw on when working with patients in their own practices. Developed by the internal medicine residency teaching staff at the University of Colorado, this book presents patient-oriented cases for 88 diseases in all areas of internal medicine. Case studies follow a question-and-answer format that mirrors rounds presentations. Each case study walks you through the workup and management of the problem and reviews the underlying pathophysiology.

The book is an excellent review tool for resident in-service exams or American Board of Internal Medicine certification exams. This edition's questions and problems have been extensively rewritten to incorporate new diagnostic methods and treatments. Coverage of urology and hepatology has been expanded. Casebook of Neuropsychiatry is comprised of 38 clinical cases based on real patient interactions that straddle the domains of neurology and psychiatry. The book is designed to supplement comprehensive texts by providing real-world accounts of patient presentations that clinicians are likely to

encounter. A STEP-BY-STEP APPROACH TO DESIGNING ACCURATE DOSING REGIMENS Casebook in Pharmacokinetics and Drug Dosing uses real-life cases to teach pharmacy students, pharmacists, and clinical pharmacists how to apply pharmacokinetics to formulate proper dosing regimens. In order to be as clinically relevant as possible, the book not only discusses drugs with readily available therapeutic serum levels, but places equal emphasis on high-alert agents with narrow therapeutic indexes. Each drug chapter is written by clinical pharmacists who have hands-on experience in drug dosing and includes an

overview of the drug's pharmacology, including: Indications Mechanisms of action Toxicities Pharmacokinetics There is comprehensive review and discussion of each drug's bioavailability, volume of distribution, clearance, half-life, therapeutic drug level monitoring, drug interactions, dosing, and availability. Each chapter is enhanced by numerous patient cases with clear step-by-step answers and explanations. Calculations, equations, and dosing recommendations are provided for each case. This is a package of DiPiro et al, Pharmacotherapy: A Pathophysiologic Approach, 6/e

and Schwinghammer: Pharmacotherapy Casebook, A Patient-Focused Approach, 6/e. Preface; The study of the history of medicine, and especially that of psychiatry, often induces in the modern reader an understandable sense of relief that he or she is living in today's world, and not at any point in the past. Yet the stories of the patients in this book, representatives of many hundreds admitted to Bethlem Hospital in the late Victorian period, will resonate with all who take an interest in mental health care today. In these early years of our own twenty-first century, the fear and stigma associated with major mental illness remain strong.

Psychiatrists and professionals in allied disciplines involved in the care and treatment of people with mental health problems still face disorders of uncertain aetiology that devastate the lives of sufferers and their families and for which there are no 'cures'. The advent of effective treatments for mood disorders and the symptoms of psychosis, some fifty years after the events detailed in this book, did of course result in tremendous improvements in prognosis and the alleviation of suffering. The nineteenth-century casebooks of Bethlem Hospital give relatively little information about the physical and chemical treatments app More

Series Editors: Moira Stewart, Judith Belle Brown and Thomas R Freeman
The application of the patient-centered clinical method has received international recognition. This book introduces and fully

examines the patient-centered clinical method and illustrates how it can be applied in primary care. It presents case examples of the many problems encountered in patient-doctor interactions and provides ideas for dealing with these more effectively. It covers a wide range of topics and issues including palliative care, abuse, dying patients, ethical challenges and the role of self-awareness. Many narratives originate from patients' and family members' experiences, providing perspectives of great power and value. The Patient-Centered Care series is of great value to all health professionals, teachers and students in primary care. When

you are ready to implement measures to improve patient safety, this is the book to consult. Charles Vincent, one of the world's pioneers in patient safety, discusses each and every aspect clearly and compellingly. He reviews the evidence of risks and harms to patients, and he provides practical guidance on implementing safer practices in health care. The second edition puts greater emphasis on this practical side. Examples of team based initiatives show how patient safety can be improved by changing practices, both cultural and technological, throughout whole organisations. Not only does this benefit patients; it

also impacts positively on health care delivery, with consequent savings in the economy. Patient Safety has been praised as a gateway to understanding the subject. This second edition is more than that - it is a revelation of the pervading influence of health care errors, and a guide to how these can be overcome. "... The beauty of this book is that it describes the complexity of patient safety in a simple coherent way and captures the breadth of issues that encompass this fascinating field. The author provides numerous ways in which the reader can take this subject further with links to the international world of patient

safety and evidence based research... One of the most difficult aspects of patient safety is that of implementation of safer practices and sustained change. Charles Vincent, through this book, provides all who read it clear examples to help with these challenges" From a review in Hospital Medicine by Dr Suzette Woodward, Director of Patient Safety. Learn the art and science of patient assessment to succeed in real-world pharmacy practice

The goal of Patient Assessment in Pharmacy is to impart the assessment and practice skills necessary to provide optimal patient care when working in an ambulatory care environment. This unique text explains how to integrate pathophysiology, medical history, physical findings, and laboratory test results to accurately assess and monitor patient problems. Patient Assessment in Pharmacy will help you make a more accurate diagnosis and enable you to better advise patients about appropriate use of products

intended for self-care. In order to be as clinically relevant as possible, Patient Assessment in Pharmacy focuses on the symptom complexes and diseases that pharmacists most frequently encounter in an ambulatory care setting. This essential companion to DiPiro, Talbert, Matzke, Yee, Wells and Posey: Pharmacotherapy: A Pathophysiologic Approach, 6/e features 5 introductory chapters and 148 case studies, which foster problem analysis and decision-making skills in clinical pharmacy practice. Cases, organized by organ system, correspond directly to Pharmacotherapy: A Pathophysiologic Approach and range from simple (a single

disease state) to complex (multiple disease states and drug-related problems). Most cases have been substantially altered in this edition and new disorders and an appendix have been added. Using a consistent, problem-solving approach, this new edition of Pharmacotherapy Casebook helps you apply the principles of Pharmacotherapy to everyday, real-world clinical issues. This is an excellent learning tool for educational programs, and an outstanding resource for independent study and staff development. 100 complex cases illustrate how to ensure safe, effective treatment during transitions between care settings. Moving a patient

from one healthcare provider or setting to another—a transition of care—increases the risk of medication errors due to inadequate communication and poor coordination of care. While guideline- and evidence-based therapy is important, pharmacists must also address other patient-specific needs and possible barriers to safety, efficacy, and to adherence of therapies. Providing a deep dive into this critical topic, Transitions of Care in Pharmacy Casebook explains how to deliver and optimize complex patient care during transitions between care settings. This essential resource features 100

enlightening clinical cases that illustrate real-world practices. Organized by disease state, each case incorporates clinical knowledge, patient education, effective communication, and social issues. Transition of Care in Pharmacy Casebook includes: An insightful introduction to transitions of care practice models 100 complex clinical cases incorporating specific elements of patient care Concise coverage of various medical conditions commonly encountered in various practice settings Considerations on treating special populations, such as the elderly and homeless patients Bulleted text explaining the theory and

rationale for each case Informative charts with lab findings, medication records, provider notes, and diagnostic exams This companion to DiPiro's Pharmacotherapy, 5/e offers students a problem-solving approach to identifying diseases and designing appropriate drug treatment strategies. The Third Edition includes new cases, diagnostic techniques, therapeutic approaches, and monitoring strategies. It features an Online Instructor's Guide with answers to all questions. 50% all new cases in this edition 50% of cases revised Over 140 cases total Organization by organ systems to coordinate with the textbook Cases range

from simple (a single disease state) to complex (multiple disease states and drug-related problems Develops skills in problem analysis and decision making Integrates the biomedical and pharmaceutical sciences with therapeutics Demonstrates the relevance and importance of a sound scientific foundation for pharmacy practice This book is a clinically relevant and educational resource for sleep specialists, practitioners, and sleep or pulmonary trainees in the management of complicated sleep disordered breathing. It tackles complicated sleep breathing disorders by discussing their epidemiology, pathophysiology,

clinical significance, physical findings, and their diagnosis and management. Organized into 21 chapters, opening chapters cover a variety of sleep apnea manifestations including hypercapnic obstructive sleep apnea, complex breathing disorders and strokes. Subsequent chapters discuss detailed approaches to PAP titrations based on best evidence, current guidelines, or expert opinion. Treatment options, complications, comorbidities, and sleep apnea in specific demographics such as pregnant women are also addressed. Complex Sleep Breathing Disorders: A Clinical Casebook of Challenging

Patients is a necessary resource for all sleep trainees and pulmonary fellows, as well as a resource for sleep specialists including sleep technicians. This essential companion to DiPiro, Talbert, Matzke, Yee, Wells and Posey: Pharmacotherapy: A Pathophysiologic Approach, 6/e features 5 introductory chapters and 148 case studies, which foster problem analysis and decision-making skills in clinical pharmacy practice. Presented in a case-based format, each case focuses on a scenario commonly encountered with an adult patient in the ICU. Case

scenarios include management of seizures and acute intracranial hypertension, sepsis, liver failure, brain death, bleeding and thrombosis, and treating hospital acquired infections in the ICU. Written by experts in the field, Adult Critical Care Medicine: A Clinical Casebook is a valuable resource for critical care specialists and practitioners who treat adult patients in critical care settings. Tinnitus and sound disorder case studies provide invaluable guidance on enhancing quality and scope of patient care

Tinnitus affects nearly one in 10 people around the world and tinnitus-related disabilities are considered among the most common chronic conditions reported. Historically, many patients with these conditions have been ignored, misunderstood, or misguided by medical, audiological, and/or

online communities. Tinnitus and Sound Sensitivity Casebook by renowned audiologists and educators Suzanne H. Kimball and Marc Fagelson provides evidence-based strategies for clinical management of patients with tinnitus as well as sound intolerance disorders, based on a diverse array of case studies drawn from clinics. The book is divided into three sections and 29 chapters, with insightful clinical pearls from 24 multidisciplinary authors. The first section includes 15 cases on a full spectrum of underlying medical conditions, patterns of occurrence, and tinnitus with normal hearing, followed by two cases covering

hyperacusis associated with an acoustic shock and diplacusis. Section two details psychological correlates for tinnitus and disorders of sound intolerance, with practical treatment strategies and coping skills for misophonia, fear hyperacusis, hyponatremia, pediatric cases, psychogenic tinnitus and dizziness, and PTSD. The final section, "Additional Considerations," includes two areas of practice currently growing in importance: patients with COVID who notice hearing changes and the co-occurrence of sound intolerance with normal pure-tone thresholds. Key Highlights Background, references, and

examples of specific conditions and interventions support audiology's scope while providing options for the practitioner who works with an otherwise underserved patient population Each case study demonstrates the complexity of audiologic rehabilitation associated with tinnitus and disorders of sound tolerance, including challenging and unsuccessful outcomes Clinical history, test results, diagnosis, outcomes, questions, answers, items to support both patient and clinician self-efficacy, and key points enhance acquisition of knowledge, while encouraging problem-solving skills This is an important textbook for every graduate

course in the area of clinical audiologic practice that addresses patient management related to tinnitus and sound tolerance. It is also a must-have reference for practicing clinicians to improve management and outcomes of patients with tinnitus, hyperacusis, and misophonia. The Addiction Casebook presents 12 patients with DSM-5 addiction diagnoses -- plus one experiencing problematic Internet use -- and illustrates practical and successful strategies for diagnosing and treating these patients. The book's cases are analogous to those that clinicians commonly encounter in their everyday practice and

effectively demonstrate the intersection of addiction with other psychiatric diagnoses. The experience and clinical wisdom of three generations of addiction specialists are distilled into a single volume that includes the most salient ideas and treatment suggestions for clinicians. This informative, practical volume strikes a colloquial, and sometimes humorous, tone. General psychiatrists and psychiatric residents seeking to gain expertise in and an understanding of addiction will find it a delight to read, as will a diverse audience of family practitioners, internists, pediatricians, medical students, allied professionals, and

anyone interested in sharpening her or his clinical skills. The book is the first to cover the diagnosis, assessment, and treatment of substance use disorders and other addictions within the DSM-5® framework. Its many valuable and helpful features include An outline of the progression in thinking about psychiatric diagnoses with the move from DSM-IV-TR® to DSM-5®. Descriptions of hands-on experience with the current diagnosis and treatment of substance use disorders and other addictions that complement substance abuse textbooks and bring the material to life. Coverage of such subject areas as alcohol,

caffeine, cannabis, hallucinogen, inhalant, opioid, sedative, hypnotic, anxiolytic, stimulant, tobacco, gambling, and Internet addictions. Key points and multiple-answer questions at the end of each chapter that highlight the chapter's most pertinent takeaways and apply and strengthen readers' knowledge of chapter information.

Extensive use of tables, figures, charts, and other instructive materials to illuminate and clarify addiction concepts. In their preface, the authors assert their hope that the book "will provide the fundamental tools for working with the substance-using patient in the hospital, the clinic, and the

community." The Addiction Casebook exceeds its goal by providing mental health and other medical practitioners with timely, current strategies for addiction diagnosis and treatment in a succinct, engaging, and entertaining volume. A new companion study guide to the most respected text in pharmacy education Goodman & Gilman's Workbook for Pharmacologic Therapeutics delivers concise, high-yield summaries of the world-renowned coverage of the actions and uses of therapeutic agents in relation to physiology and pathophysiology found in Goodman & Gilman's The Pharmacological Basis of

Therapeutics. In order to maximize the learning and teaching experience, this unique review is packed with pedagogical aids such as learning objectives, summaries of key points, self-assessment Q&A, case vignettes, and a complete test bank in the final chapter. Perfect as a self-study guide or as a required classroom review, Goodman & Gilman's Workbook for Pharmacologic Therapeutics contains features and content that will appeal to both students and professors. In these twelve interconnected tales, David Peace—acclaimed author of the Red Riding Quartet, Occupied City, and Tokyo Year Zero—weaves fact

and fiction as he takes up the brief but fiercely lived life of the early-twentieth-century Japanese writer Ryūnosuke Akutagawa. Unique and offbeat, Patient X delves into Akutagawa's rich and complicated private life: his fears and battles with mental illness; his complex reaction to the Westernization of Japan; his exacting creative process; and his suicide, weaving these facets into a hauntingly evocative portrait. But Patient X is more than a paean to one remarkable writer: it is also an incandescent exploration of the act and obsession of writing itself, and of the role of the artist in times that darkly mirror our own. The casebook sharpens problem-solving and clinical decision-making skills you need to identify and resolve commonly encountered drug problems. More than 155 patient cases--5 new in the 8/e

makes the perfect study companion to the 8/e of Dipiro's Pharmacotherapy: A Pathophysiologic Approach. Get the Dipiro text, plus casebook package and ACE your Pharmacotherapy Course! Formal training in clinical neuropsychology introduces trainees to diverse patient populations with a variety of conditions and disorders. Learning to competently apply a structured, fact-finding approach to case conceptualization, differential diagnosis, and treatment planning is an essential goal at all levels of training. This approach provides a valuable exercise and method of examining practitioner

competence. The structured approach to case analysis promotes good clinical decision making, and exercises based on such an approach can help prepare clinicians for the oral exams that are a part of board certification. The Neuropsychology Fact-Finding Casebook is a resource for both supervisors and trainees in clinical neuropsychology, as well as for clinicians preparing for board certification. The volume provides 24 compelling and diverse fact-finding cases, one for each month of a two-year residency. Each case is presented in a stepwise fashion: presenting problem and referral question, background information and

patient report, behavioral observations, and test findings. At the end of each case, a summary, diagnostic impression, recommendations, and questions are provided to assess, reinforce, and teach core competencies; an outcome section describes what occurred after the full case evaluation is completed; and critical teaching points are discussed. This Casebook is a standardized approach to fact-finding that training programs at various levels can use to help trainees develop such evaluation skills. Make the right drug therapy decisions with the leading guide to applying pharmacotherapy principles to real-world clinical
